Refrigerant Leak Detector is Certified to Meet EN 14624

Hialeah, Florida, Techno Tools Corporation, a manufacture of hand held electronic diagnostic and test instrumentation has announced that its model D440A, heated sensor refrigerant leak detector, was certified by a qualified independent test laboratory to comply with European Standard EN 14624. The purpose of the Standard is to qualify the performance of leak detectors of CFC, HCFC, HFC, and PFC refrigerant gas. The leak detector's sensitivity is checked with a calibrated leak device. The Standard exists in three official versions, English, French, and German.

The model D440A has also been certified to comply with the SAE International Standard J2791. The new SAE Standard was published in September of 2008 and it was created in response to a need to reduce refrigerant HFC 134a emissions and to establish minimum performance criteria for an improved class of electronic hand held probe-type refrigerant leak detectors capable of finding very small to moderate leaks.

For information concerning the model D440A or the two Standards, contact Techno Tools Corporation, Customer Service Department, 2651 West 81st Street, Hialeah, Florida 33016, www.techno-tools.com, or call 786.235.1200 or 800.222.0956.
