**Techno Tools Corporation announces the B400**

**Hialeah, Florida,** Techno Tools Corporation, a manufacture of hand held electronic diagnostic and test instrumentation has announced the release of its heavy-duty B400. The product is a conductance battery tester, charging system, and starting system tester.

The B400 tests 12-volt heavy-duty auto, truck, commercial and marine batteries and 12/24/36 volt starter and charging systems. It is not necessary to know the battery size to use the instrument. This eliminates tester input errors and allows the testing of batteries of unknown size. Just connect the instrument to the battery and the voltage is displayed automatically. Then simply choose between automotive or truck battery type batteries for testing and press the Test Button. The battery condition is shown digitally as a percent of available battery capacity. The LED Bar Graph also displays the battery condition as Good, Marginal, or Replace. The instrument features heavy-duty abrasion resistant cables, four feet in length, for trucks and buses with hard to reach battery compartments.

For information concerning the model B400, contact Techno Tools Corporation, Customer Service Department, 2651 West 81<sup>st</sup> Street, Hialeah, Florida 33016, [www.techno-tools.com](http://www.techno-tools.com), or call 800.222.0956.
